SUMMARY

Product Designer with 6+ years in UX, designing complex, workflow-heavy products across web and mobile.
I help teams find the right solution early through research and prototyping, and build Design System patterns together with engineering to cut design-to-development time: less rework, faster and more consistent releases.
I own the full design process, from problem framing to high-fidelity UI and quality through implementation, with strong attention to detail in visual and interaction design. I use AI tools (ChatGPT, Claude, Figma AI) in my daily work.
Domains I've worked in: SaaS, GovTech, E-commerce, FinTech, Marketplace.

WORK EXPERIENCE

EPAM Systems, UX Designer — Nov 2020 – Present

Worked on complex products across domains, where I:

- Led design end-to-end as the sole designer on multiple products and defined the design process, from discovery to handoff
- Ran discovery workshops with stakeholders to define project scope and deliverables
- **Legal SaaS**: fixed long-standing usability issues across key user journeys, cutting steps to improve retention; shipped in 3.5 months
- **E-commerce**: planned and ran 5 interviews and 7 usability tests on a ticket purchase flow, turning insights into a mobile-first redesign
- **GovTech portal**: created the visual strategy and Design System, designed sign-up and post-login flows from scratch
- Presented and justified design decisions to stakeholders and product teams, aligning solutions with business goals
- Onboarded new designers and mentored junior designers
- Built scalable Design System patterns with engineering: components with full states and variables
- Owned quality through implementation: Visual QA and accessibility checks (WCAG 2.2, keyboard navigation) with developers and QAs
- Crafted pixel-perfect, accessible UI and interactive prototypes

Freelance, UX/UI Designer — Sep 2019 – Feb 2020

- **Car-sharing iOS app**: ran user interviews and usability testing, designed UX improvements based on the findings
- **CRM systems**: designed user flows, wireframes and UI for custom business apps

Freelance, Graphic Designer — Jul 2017 – Jul 2019

Created designs for clients (posters, menus, covers, banners, vector illustrations) in Adobe Photoshop and Illustrator.

EDUCATION

Product Design Course at Product Expedition, 2026

E-commerce Course: Tier 2 – Professional at Baymard Institute, 2024

Design Sprint Course at Service.so, 2024

Visual Bootcamp at EPAM (internal course), 2022

UX Design Course (HCD) at Projector, 2020

Bachelor's Degree in Graphic Design at M. Boychuk Kyiv National Institute of Applied Art and Design, 2016

PROFESSIONAL SKILLS

UX design, Product design, Visual design, Prototyping, User research, Interviews, Usability testing, Information architecture, Workshop facilitation, Design systems, Accessible design, Cross-functional collaboration, Advanced Figma, Stakeholder management, English (B2+).
